Prior to sliding Dektite down over pipe, place a continuous bead of approved sealant around pipe at the height of the boot so that when the boot is in place the top of the boot engages the sealant (see note below).

Dektite pipe flash; cut to pipe size in field so that flashing fits "snuggly" around pipe; set base in continuous bead of approved sealant.

3/16" dia. aluminum bulb-tite rivet w/ sealing washer.

*Snuggly means no water can penetrate between top of boot & pipe.

NOTE: Do not attempt to seal Dektite boot to threaded area of air terminal. Apply a sealed, smooth collar on air terminal, if necessary, at Dektite interface to insure proper seal.
